

1. The **signalling module** should be connected to the **separator socket** on the side wall of the **VBE-7** device with a **PM00249 cable**. Connecting the module automatically deactivates the main tongs socket.
2. The tongs should be connected to the **signalling module tongs socket** with the **PM00252 adapter**.

Signal lights:

- yellow light - **END OF STUNNING**
- red light – **STUNNING**
- green light – **TWO-STAGE MODE; 3 ELECTRODE STUNNING**
- white light - **POWER ON**

ATTENTION!

The signal lights on the signalling module operate in the same way as the corresponding lights on the **VBE-7** device.
